ABSTRACTED-PUB-NO: NL 1011099C

BASIC-ABSTRACT:

NOVELTY - The handle of the suitcase (9) retracts into a recess in its top face. Extending the telescopic arms (12) operates a cam and follower to extend a pair of wheels (15). A partition within the case provides separate housings for a document case and clothes.

USE - To carry documents and/or clothes in separate compartments in a suitcase that has retractable wheels that extend automatically with the extending handle.

ADVANTAGE - Improves on the earlier design by the same applicant. The center of gravity of the case is above the extended wheels so that the person pulling the case bears no lifting load.

DESCRIPTION OF DRAWING(S) - The drawing shows the case with handle and wheels extended.

Handle 9

Telescopic arms 12

Wheels 15

CHOSEN-DRAWING: Dwg.3/11

TITLE-TERMS: SUITCASE TWO COMPARTMENT RETRACT WHEEL TOW HANDLE
